

## Avaya 1600 Value IP Phones

The 1600 Series IP Telephones - one-X Deskphone Value Edition is a family of cost-effective IP Telephones that deliver familiar features at an attractive price point for customers with **basic communications needs**.

The 1600 Series IP Telephones - one-X Deskphone Value Edition are cost-effective IP Telephones designed to support three user profiles: **Walkup, Everyday and Navigator**.

**Walkup** users use phones in locations such as common areas in offices, stockrooms, lobbies, or drop-in desks. Users are building visitors, employees, or even customers who need a phone with a simple, familiar interface.

**Everyday** users typically rely on several forms of communication, including voice and email. While Everyday users require a quality telephone, they rarely receive more than five or six calls per day. Cubicle workers, and sales staff within a retail store, are examples of Everyday users.

**Navigator** users (Branch receptionists and admins) are people who answer incoming calls, transfer customers to different departments or extensions, and monitor several line appearances throughout a typical day.

### Investment Protection...

The design of the 1600 series terminals provides an open standards adapter to support a range of additional modules. This ensures investment is protected for enhanced capabilities as needed in the future. For example, an external gigabit ethernet adaptor allows you to connect to a PC enabling high speed connection to applications on your network. Alternatively, the 32 button expansion module for the 1616 terminal can be customised to fulfill a wide range of specific user needs.

### The right solution for your business...

The 1600 series offer businesses a wide choice of terminals, which suit a range of different user profiles.

Matching the communication needs of the user and the terminals on their desks provides great business benefits.

### Enhance employee productivity...

The 1600 terminals have been designed to make communication functions easier and quicker to accomplish. Increased call control and call management capabilities are achieved via the intuitive user interface which can significantly help to improve user efficiency.

The 1600 terminals include all the productivity enhancing features normally only associated with high end, more expensive terminals.

### Cost effective IP telephony solution...

With features and capabilities generally not found in similar priced IP terminals, the 1600 series are an ideal choice for businesses seeking an easy, cost effective transition to IP telephony. The high quality design and excellent reliability of the 1600 terminals provides a long return on your investment and lowers your total cost of ownership.

### Common Value Edition Telephone Features:

Each line button includes dual LEDs (red, green) providing explicit status for the user. For a familiar look and feel, these telephones include several fixed feature keys for common telephone tasks including conference, transfer, drop, hold and mute.
